
Five audit conditions
sender
receiver
striped block = one of:
real
own cache
zeroed
all zeros
random
matched noise
mismatched
another question's
audit of Cheng et al.
dropped
no cache at all
no-cache control
asks: wrong worse than none?
(a) Sequential chain
redundant route: receiver reads passages
Q+P
Q+P
Q+P
Reasoner
Verifier
Finalizer
answer
(b) Static fan-in
sole route: cache is the only path to passages
Child 1: passages 1–5
Child 2: passages 6–10
RoPE-shift
+ concat.
Aggregator
question only
answer
(c) RLM+KV delegation
redundant route: root keeps passages
Q+P
Root model
writes code, delegates
delegate
Sub-call
RoPE-shift + splice into the root's cache
Q+P
= question and passages in the agent's own prompt
